FAMILY. FAMILY. Is produced in the produced	Oncogene 13:1343-1352(1996). -i- FUNCTION: MAY PLAY A PIVOTAL ROLE IN FOREBRAIN FUNCTION. BINDS TO, AND INDUCE THE COLLAPSE OF, COMMISSURAL AXONS/GROWTH CONES IN VITRO. MAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF LONGITUDINALLY PROJECTING AXONS (BY SIMILARITY). -i- SUBCELLULAR LOCATION: Type I membrane proceini- TISSUE SPECIFICITY: HIGHLY EXPRESSED IN BRAIN; EXPRESSED IN EMBRYONIC FLOOR PLAYE. ROOF PLAYE AND HINDERAIN SECVENTS.	SEQUENCE FROM N.A. "Complementary expression of transmembrane ephrins and their receptors and the mouse spinal cord: a possible role in constraining the reference of longitudinally projecting axons.";

To rientation of longitudinally projecting axons.";

L Development 127:1397-1410(2000).

C -!- FUNCTION: MAY PLAY A PIVOTAL ROLE IN FOREBRAIN FUNCTION. BINDS TO, AND INDUCE THE COLLAPSE OF, COMMISSURAL AXONS/GROWTH CONES IN CUTTRO. MAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF LONGITUDINALLY PROJECTING AXONS.

C -!- SUBCELLULAR LOCATION: Type I membrane protein.

C -!- SUBCELLULAR LOCATION: Type I
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    This SWISS-PROT entry is copyright. In the mouse spinal cord; a possible role in constraining the
orientation of longitudinally projecting axons.";

Liperelopment 127:1397-1410(2000)

- PUNCTION: MAY PLAY A ROLE IN CONSTRAINING THE ORIENTATION OF
C. LONGITUDINALLY PROJECTING AXONS.

- SUBGUNIT: BINDS TO THE RECEPTOR TYROSINE KINASE EPHB4.

- SUBGLIPTIALLY ON COMMISSURAL AXON SEGMENTS THAT HAVE PASSED THROUGH
THE FLOOR PLAYE. EXPRESSED ON LATERAL FLOOR PLAYE CELLS,
SPECIFICALLY ON COMMISSURAL AXON SEGMENTS THAT HAVE PASSED THROUGH
THE FLOOR PLAYE. EXPRESSED IN CELLS OF THE RETUNAL GANGLION CELL
LAYER DURLING RETUNAL AXON GUIDANCE TO THE OPTIC DISC.

- PENELOPMENTAL STAGE: EXPRESSED IN THE FLOOR PLATE THROUGHOUT THE
DERROOD OF COMMISSURAL AXON PATHFINDING.

- PERROD OF COMMISSURAL AXON PATHFINDING.

- SENTILARITY: BELONGS TO THE EPHRIN FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  P52800;
